Outer Ring

Inner Ring

360 Degree  
PTZ Camera

Rings of micropower wireless PIRs trigger the camera's PTZ motors and automatically position the camera for the field of the target and then track it. The motors and analog camera are normally off, using zero battery power. An analog video transmitter is also activated and transmits video to a receiver connected to a network. The system is timed and automatically shuts off. Perpetual operation is possible with solar charging.
