

IP Camera/Encoder Digital Input/Output Wireless Control

Video
WAN

The Digital Input/Output Control Circuits on most IP Cameras/Encoders allow for triggering of events, such as recording with the Digital Input. The Digital Output, which is an Icon on this IP camera's webpage allows control of remote devices. We'll show you how to use these features wirelessly with wireless sensors and wireless remote power control of doors, gates, lights, etc.

DI and DO

Digital input: The active state is ; the current state detected is Normal
Digital output: The active state is ; the current state detected is Normal
